

Tailor-Made Patio Oasis

After numerous discussions with our customers, we have successfully developed a terrace partition system that combines aesthetic appeal, ease of assemble, cost-effectiveness in transport, lightweight and robust construction, multifunctionality, adaptability to any height and width. Most importantly, it is made of beautiful larch wood – a material that is eco-friendly and naturally durable without any treatment.

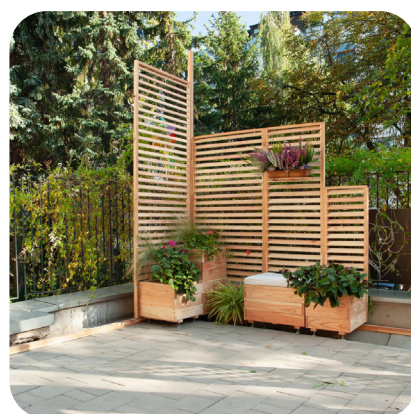

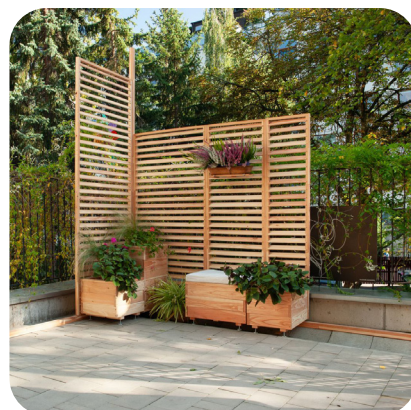

The system has 2 versions

Larix made of horizontal slats - a modern, trendy design. Both versions provide privacy by limiting visibility from the outside, reducing noise levels and protecting from the sun and rain.

Venetian inspired by Venetian-type blinds, made of slats inclined at 45 degrees. Both versions provide privacy by limiting visibility from the outside, reducing noise levels and protecting from the sun and rain.

Larix and Venetian

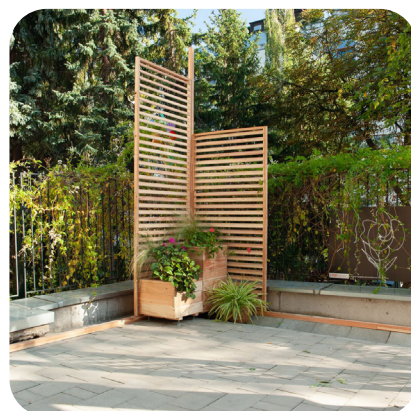

patio partitioning systems are composed of 1 basic component in 3 widths:

h 60 cm x 40 cm

h 60 cm x 60 cm

h 60 cm x 90 cm

By stacking the elements on top of each other, a height multiple of 60 cm can be achieved. To accommodate any balcony height, the components can be easily cut to any size with a handsaw. The finishing element stabilises the structure and fits into any cut-to-size component. The width of the wall is obtained by using 90, 60 and 40 cm wide elements and multiples of these dimensions.

It is also possible to use a planter or a bench as a starting module of the partition wall. We use the same planters and bench for both Larix and Venetian systems. The planters are available with a depth of 25 or 40 cm. The 25 cm depth allows you to build a planter wall and train climbing plants even on very narrow balconies, while the 40 cm depth is ideal for large areas, especially when you want to enclose a balcony at 180 cm and above.

The systems are designed for easy installation and do not require drilling or disturbing existing railings or floors. The walls are held in place by planters or, in the case of the version without planters, by strong 45 x 45 mm double-layered larch mounting posts, used horizontally and vertically.

Accessories available:

- screw-in feet for level adjustment,
- swivel castors,
- shelf with hook,
- flap to create a bench.

To reduce costs and shipping time, all system components are packed in UPS and DHL shipable packages - cardboard boxes weighing less than 31 kg and measuring less than 120x60x60 cm.

We are garden wood specialists with over 30 years of professional experience; we love working in wood and creating beautiful, functional and durable products. We only use European timber from sustainable sources and provide our customers with the highest quality products.
